ACADEMIC PROJECTS	
Machine Learning	Smart Water Tank Management using Hybrid Deep Learning and Ensemble Models <ul style="list-style-type: none">• Description: Built a two-stage system for forecasting water demand and optimizing refill decisions using a hybrid LSTM + Transformer model and ensemble classifiers (XGBoost, Random Forest).• Technology: Python, TensorFlow, Scikit-learn, XGBoost, Pandas, Google Colab• Achievements: Achieved ~94.56% accuracy in demand forecasting and over 96% accuracy in refill decision classification using XGBoost.
Machine Learning	Machine Learning for Drug Discovery using ChEMBL <ul style="list-style-type: none">• Description: Developed a machine learning model to analyze bioactivity data from ChEMBL and predict potential drug-target interactions.• Technology: Python, Pandas, NumPy, Scikit-Learn, RDKit, ChEMBL API.• Result: GNN model achieved 87.9% accuracy, outperforming the Random Classifier's 75%.
Web - development	Days Left Countdown Chrome Extension <ul style="list-style-type: none">• Description: Developed a visually engaging Chrome new tab extension that displays a live countdown to a target date, complete with dynamic progress bar, motivational quote, and time breakdown.• Technology: HTML, CSS, JavaScript• Role: Designed the UI, implemented countdown logic, and ensured interactivity and responsiveness.
